<http://intranet.wiut.uz/Shared%20Documents/Forms/AllItems.aspx> - Coursework online submission instructions.doc

MARKERS FEEDBACK (Continued on the next page)

--

Audience profile

Website Melegram was developed for fast and easy communications. Users of the website can instantly see received messages and reply to them. Main target audience are teenagers and adults. Software does not filter any sent content; hence it is not recommended for kids under 13 years old. The company's ultimate mission is to expand world-wide and build servers on every continent, however, it supports only developers' local country – Uzbekistan.

Functions and features

The key functions of the website are the following:

1. Adding new contacts
2. Receiving and sending messages to contacts

Currently developers are working on enabling file-sharing, once this task will be completed, they will launch voice-messages. Melegram yet, is not a responsive website, because developers did not have enough time to complete responsiveness before the deadline, since there are other deadlines as well.

The key features of the website:

1. Saving contacts on the cloud. Once a contact was added to contacts lists, the user can see and text this contact on any other device.
2. Contacts page also support quick and fast message retrieving. With one click users can see their message histories.
3. Meaningless contacts. Sometimes it happens, that people accidently press on the add button when they are adding a new contact. Soon, they delete this contact, which is a tedious task. That is why, Melegram validates the form before saving to contacts and if a phone number is incorrect or if name filed was left empty, user will see warning message. This will minimize incorrectly saved contacts.

Source Code online deployment

1. GitHub repository: https://github.com/st00010196/WT_CW1_Ref
2. Netlify deployment: <https://wt-cw1-00010196.netlify.app/>
